Each lab group will write a report on the batching of their selected concrete mixture. Please start with the template we discussed in class, which can be found on the class website.

Your goal is to “tell the story” of how your concrete mixture was designed, mixed, cylinders cast, etc. The template is only a guide. You may add or delete headings as your group feels appropriate. Your report should include at least one Table and one Figure.

Your goal is to include all of the important details from the trial batch “project” while keeping the document clear and concise.
